E-Course 06

Financial Disclosure

- I do not currently have any relevant financial relationships to disclose.

Off-Label Use Disclosures

- I do not intend to discuss off-label uses of products during this activity.

Objectives

- Overview of Immuno-Oncology
- Addressing patient expectations while receiving Immuno-Oncology (I/O) therapies
- Provide resources for use within your scope of practice

AN
INSTITUTE
OF ACCC

What is Immuno-Oncology?

- Immuno-oncology is working with the body's own immune system to fight off cancer.
- Target the body's immune system, not the tumor itself.
- It gives long-lasting memory to the immune system.

Why Immuno-Oncology?

- Better Quality of Life
- Longer survival
- Side effect **profile** is more manageable vs. traditional chemotherapy.

Patient Expectations

“The real winners in life are the people who look at every situation with an expectation that they can make it work or make it better.”

-----Barbara Pletcher

Patient Expectations

- Patient expectations are going to continuously evolve as Immuno-Oncology evolves
- Must be willing to adapt to changes in patient expectations

Algorithms

- Identify a physician champion
- Must be a good leader
- Review the data often and be willing to make changes based on new data
- Involve key personnel
- Include the patient

Financial Issues/Access

“People diagnosed with cancer are almost three times more likely to declare bankruptcy than are those without the disease, a large new study suggests.”

---Barbara Bronson Gray (HealthDay News)

Financial Issues/Access

- Patient stressor
- Talk to the office/hospital financial counselor
- Enroll in every patient assistance program possible
- Inform the patient of billing issues
- Refer to ACCC's website!

Explanation of Therapy

- “CheckPoint” Inhibitors address a major escape mechanism of tumor cells; that is tumor cells express “checkpoint proteins” on their cell surfaces and these proteins serve to dampen the immune system response to the antigenic proteins that the cancer cells also express.
- The “checkpoint inhibitors” (e.g., ipilimumab, nivolumab, pembrolizumab) target and inhibit the activity of the “checkpoint proteins” and thus these inhibitors reactivate and enhance the immune response against the tumor.

Side Effects

- Expect the unexpected
- Empowerment
- Teach-backs
- ER visits
- Long-term effects
- Survivorship

Side Effects

**ICLIO Managing Adverse Events
Webinar: accc-iclio.org**

Effective Communication

*“First seek to understand,
then to be understood”*

---Stephen Covey, (Author of “The 7 Habits of Highly Effective People”)

Effective Communication

- Listen
- Open Communication
- Build Trust
- Open-Ended Questioning

Caregiver Role

- Identify who is the caregiver?
- What is their relationship to the patient?
- What is their role?
- Engage the caregiver

Clinical Trials

- Participation
- New advancements
- New technology
- Longer survival

Clinical Trials cont.

Conclusion

“Immuno-Oncology is not a compound or a new drug, but a toolbox a new paradigm to fight cancer.”

----Dr. Britten
