This conference provides a unique opportunity for medical, surgical, and radiation oncologists and other health care professionals to learn from and interact with international leaders in the field of breast cancer to increase knowledge, apply new data to practice, and improve patient outcomes.

LEARNING OBJECTIVES

- Incorporate evidence from recent clinical trials of systemic agents for the treatment of early-stage and metastatic breast cancer into personalized treatment plans to ensure optimal patient outcomes
- Assess emerging data from clinical trials of novel investigational agents for the treatment of breast cancer, and how these data may impact treatment algorithms
- Implement multidisciplinary team-based strategies for recognizing and managing treatment-related adverse events for patients with breast cancer in order to reduce risk of harm while maintaining efficacy
