Daniel Barocas, MD, MPH, FACS, *Vanderbilt University Medical Center*
- 3:15 PM **Session TBD**
- 4:00 PM **Closing Remarks**
- 5:00 - 8:00 PM **Evening Event**

Agenda as of 06.27.22. Session details subject to change.

Enhancing Equity in Clinical Research: Lessons Learned from Community Oncology Engagement Efforts

Richard L. Martin III, MD, MPH, *Tennessee Oncology*

Ensuring diverse representation in clinical trials is key to advancing health equity; however, underserved populations continue to be widely underrepresented. Hear firsthand, one cancer practice's frontline experiences in implementing equity in oncology research, including several notable challenges and how they may reveal opportunities to improve future efforts.

Integrative Oncology

Donald Abrams, MD
University of California San Francisco

Many patients diagnosed with cancer seek ways to increase their sense of control. This session will review the principles of integrative oncology, including the role of nutrition, physical activity, traditional Chinese medicine, and stress reduction in helping patients navigate their cancer treatment journey.

How to Improve the Oncology Patient Care Experience

Susan Keane Baker, MHA
Author, *Split Second Kindness*

The personal rewards of working in oncology are closely linked to the quality of relationships developed with patients and colleagues. How can you create a positive experience, even when time is limited? By strategically focusing on the two things almost every person wants and recognizing a key driver of patient satisfaction. Discover realistic strategies you can use to promote better relationships and build rapport when time is limited.

At the end of this educational activity, participants should be able to:

- Summarize recent advances in diagnosing and treating a variety of cancers.
- Describe the role of biomarker testing for diagnosing and treating some common cancers.
- Use new knowledge about immunotherapy to inform treatment decisions.
- Discuss the need for more equity in clinical research and cancer care.
