RE:Patient name DOB:

Dear Dr.XXXX,

Your patient recently participated in the Total Lung Care Center's early detection screening. Enclosed are the results from your patient's screening test.

The results of your patient's early CT lung screening test were found to be abnormal. Please see the attached report. The radiologist recommends follow up in the form of a repeat CT in 3 months. The future scans will be diagnostic and therefore covered by the patient's insurance. The patient was asked to call your office for an appointment.

We hope you find this information helpful. The Lung Nurse Navigator can help in coordinating care for your patient, please give me a call at #860-358-2030.

Sincerely,

Gean Brown, RN, OCN
Clinical Manager
Total Lung Care Center
