

The following was reviewed with the patient on the specified date prior to or on the day of the CT lung screening:

___ Determined that they were eligible for CT lung screening:

- Age _____

___ Has no signs or symptoms of lung cancer, eg. new cough, hemoptysis, or unexplained weight loss, assessed for any new symptoms

- Current smoker _____ If quit, year quit: _____
- Pack year history: Average number of packs smoked per day (20 cigarettes in a pack) _____ X Number of years smoked _____ Equals pack years: _____

___ Reviewed following benefits and risks of lung cancer screening and provided with written information to support it (document on CT lung screening facts based on the Lung Cancer Screening Trial)

___ Reason for screening and evidence, benefit of diagnosing lung cancer early at most curable stage

___ Radiation exposure

___ False negatives

___ False positives/additional testing

___ Over-diagnosis

___ Findings not related to lung cancer

___ Reviewed importance of annual screening and the impact of comorbidities and ability and willingness to undergo diagnosis and treatment . Patient understands that if an early lung cancer is found, surgery is the primary treatment and they must be in good enough health to have surgery where the benefits of treatment outweigh the risks of treatment.

___ Counseling of up to 10 minutes on smoking cessation in addition to provision of resources, patient education, and program at Northwest Community Healthcare
